Exempt, Evade, Enforce:
Unpacking Property Tax Dynamics in the Short Term Rental Market

Kara Jones

October 2026

Central Public Finance Question

- Maximize Revenue
- Minimize Distortion to Behavior
- Minimize Disruption to Markets

An effective tool to strike the balance

- Third party reporting
- Business and income taxes

Requires costly resources and enforcement

- Possible to have a **spillover effect** from other tax reporting?

Research Question

1. How does third-party reporting affect compliance with taxes it does not directly target?

Central Public Finance Question

- Maximize Revenue
- Minimize Distortion to Behavior
- Minimize Disruption to Markets

An effective tool to strike the balance

- Third party reporting
- Business and income taxes

Requires costly resources and enforcement

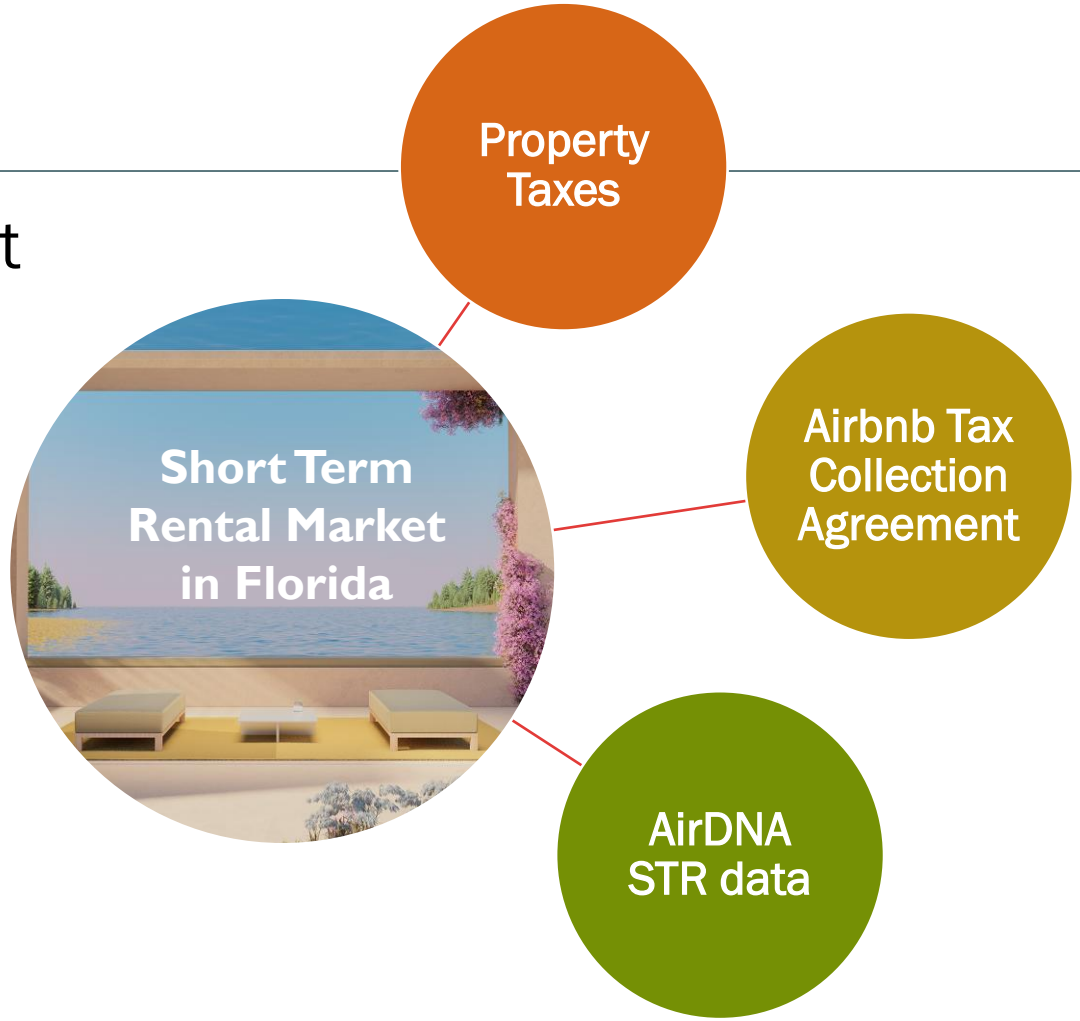

- Possible to have a spillover effect from other tax reporting?

Research Question

1. How does third-party reporting affect compliance with taxes it does not directly target?
2. 3 things needed to answer:
    1. A tax where people have a strong incentive to evade and there is limited enforcement
    2. A policy change in indirect reporting
    3. Data showing tax behavior before and after the change

Research Question

1. How does third-party reporting affect compliance with taxes it does not directly target?
2. 3 things needed to answer:
    1. A tax where people have a strong incentive to evade and there is limited enforcement
    2. A policy change in indirect reporting
    3. Data showing tax behavior before and after the change

Motivation

Background

Empirical Strategy

Data

Results

Conclusion

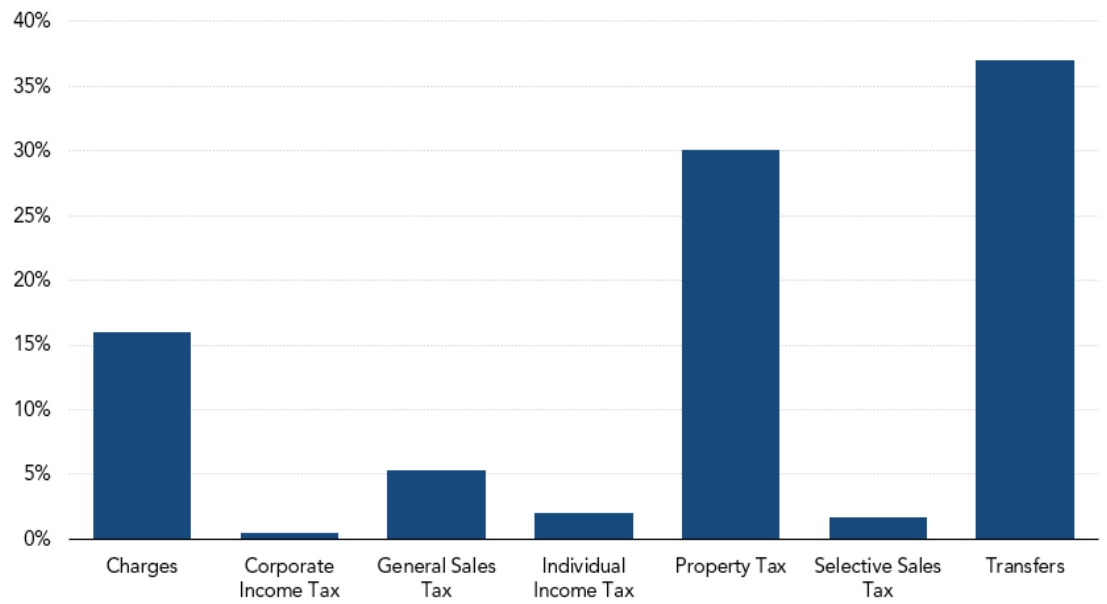

Motivation: The Hidden Backbone of Local Finance

- The property tax is the primary funding source of US counties
  (Yushkov, 2024)
- 30% of local government revenue
- $581 billion in 2021
  (Lincoln Institute 2024)

FIGURE 3

Sources of Local General Revenue

Share of total local general revenues, by source, 2021

Source: US Census Bureau Annual Survey of State and Local Government Finances, 1977-2021 (compiled by the Urban Institute via State and Local Finance Data: Exploring the Census of Governments; accessed 14-Jul-2023 10:05), https://state-local-finance-data.taxpolicycenter.org.

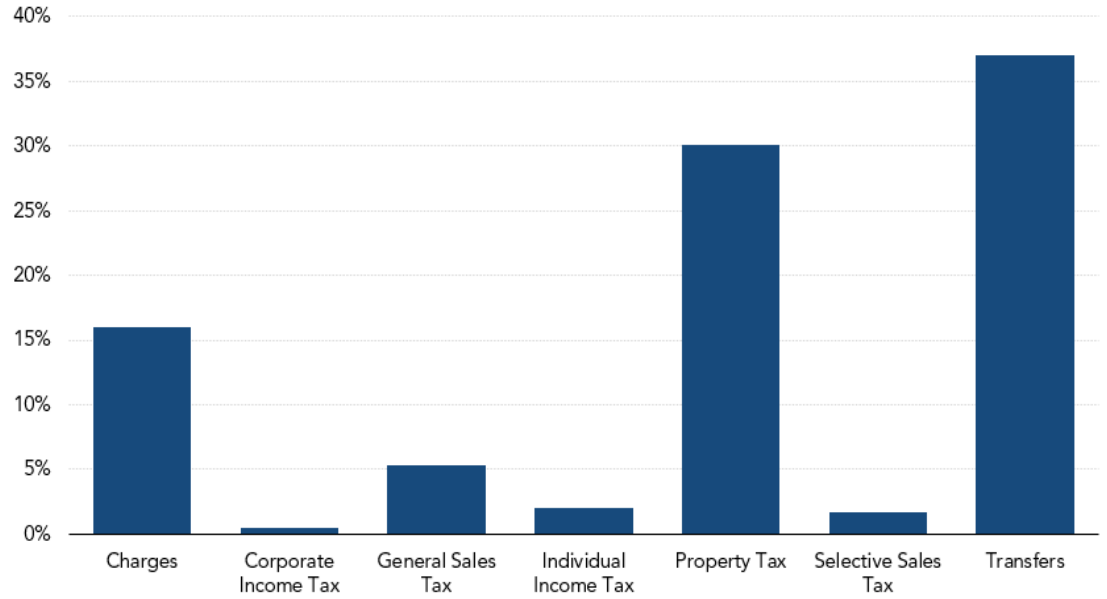

Motivation: The Hidden Backbone of Local Finance

- Evasion erodes the tax base
- Enforcement lags short term rental (STR) expansion
- Dual Problems:
  1. **Increased public service demand**
  2. **Reduced tax revenue**

FIGURE 3

Sources of Local General Revenue

Share of total local general revenues, by source, 2021

Source: US Census Bureau Annual Survey of State and Local Government Finances, 1977-2021 (compiled by the Urban Institute via State and Local Finance Data: Exploring the Census of Governments; accessed 14-Jul-2023 10:05), https://state-local-finance-data.taxpolicycenter.org.

Motivation: Increased Public Service Demand from STRs

- Competition with residents for public resources
- Especially important in times of overcrowding (Palombo 2015)
- Increase demand for police, fire, EMS, and waste services

Motivation: Increased Public Service Demand from STRs

- Competition with residents for public resources
- Especially important in times of overcrowding (Palombo 2015)
- Increase demand for police, fire, EMS, and waste services
- STR-dense neighborhoods see higher violent-crime rates and 911 calls
  - Boston (Ke et al. 2021), Portland & New Orleans (van Holm & Monaghan 2021)
- More waste generation, ER visits, and lower discretionary spending (Arora et al. 2025)

Motivation: Reduced Tax Revenue

- Municipalities face rising administrative and enforcement costs
  - Licensing, inspections, and data contracts (Office of the City Treasurer 2021)
- Tax Avoidance and Evasion through property tax exemptions
- Large tax breaks for owner-occupied homes
  - Homestead Exemption (HE)
  - Legal Residence Exemption (LRE)
- No annual verification

Investigations, Tips Lead To More Than $550 Million In Property Tax Fraud Recovery

Kelly Phillips Erb Forbes Staff

This Paper

- **Question 1:** How does third-party reporting affect compliance with taxes it does not directly target?
- **Question 2:** How do STR hosts avoid and evade property taxes?
- **Context**: Rental day limits for the homestead exemption in FL
  - Exceed **30** day limit → increase tax bill
  - Introduces a tax notch
  - Change in Reporting: Airbnb Voluntary Collection Agreements (VCAs)
- **Method:** Bunching Estimator to measure behavioral changes
- **Data:** AirDNA data, FL, 2015-2024

Preview of Results

1. How does third-party reporting affect compliance with taxes it does not directly target?

2. How do STR hosts avoid and evade property taxes?

Preview of Results

1. How does third-party reporting affect compliance with taxes it does not directly target?

2. How do STR hosts avoid and evade property taxes?
   - They bunch below the limits to avoid taxes
     - Florida hosts reduce bookings by ~16 nights
   - Tax evasion prior to third party reporting
     - Change in bunching patterns before and after Airbnb VCAs

Preview of Results

1. How does third-party reporting affect compliance with taxes it does not directly target? **Increases compliance through perceived increase of audit probability**
2. How do STR hosts avoid and evade property taxes?
   - **They bunch below the limits to avoid taxes**
     - Florida hosts reduce bookings by ~16 nights
   - **Tax evasion prior to third party reporting**
     - Change in bunching patterns before and after Airbnb VCAs

Contribution to Tax Evasion and Sharing Economy Literatures

Tax Compliance & Information Reporting

- Third-party reporting reduces evasion in income and business taxes (Kleven et al. 2011; Persson 2019)
- Property tax evidence focuses on salience and enforcement: reminders, lien threats, social norms (Perez-Truglia & Troiano 2018; Hallsworth et al. 2017)
- **Contribution: Reporting for one tax spills over to compliance with another**

STR Regulation & Taxation

- STR bans and taxes affect housing markets and platform activity (Koster et al. 2021; Bei et al. 2023; Garz 2023; Li et al. 2022)
- Airbnb VCAs raise prices, reduce bookings, and affect entry and exit (Bieber 2021)
- **Contribution: First causal evidence on STR property tax compliance, identifying rental-day evasion as a new margin**

SHORT TERM RENTALS (STRS)

STR Market in Florida

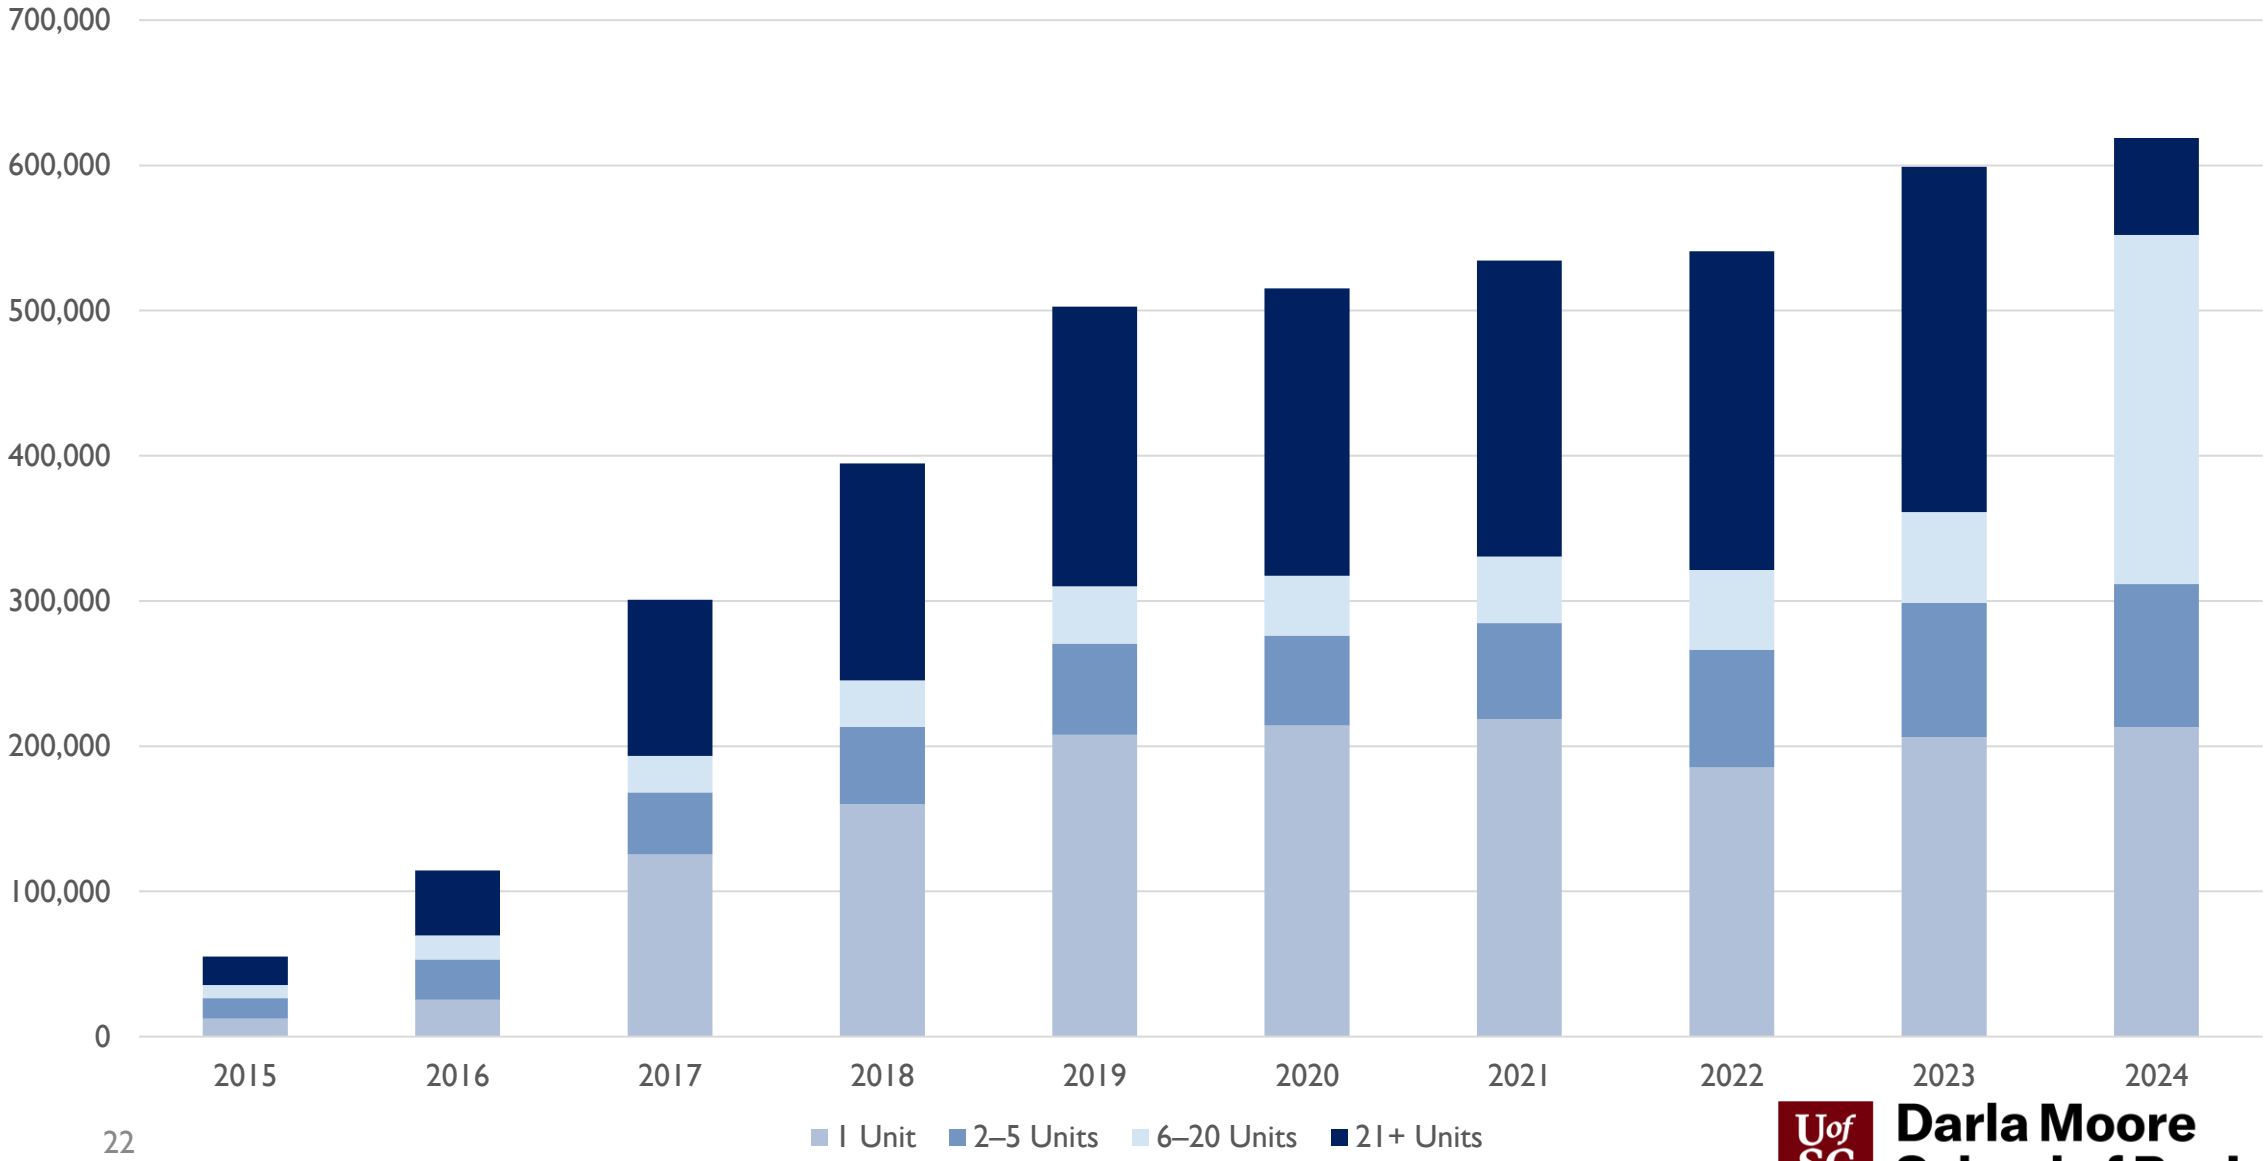

- Majority of STRs are Entire Homes
- Over $12 billion in revenue in 2024
- Approx. 10.5 million reservations in 2024
- STRs listed for an average of 3.09 years
- Most STR hosts own 21+ units (39%)
  - 1 unit: 37%
  - 2-5 units: 15%
- Popular Destinations?

CONCEPTUAL FRAMEWORK

Conceptual Framework: Taxpayer Optimization

Homeowner i rents house h_i for N_i nights in year

Profit without notch

Millage Rate

$$\pi_i = p \cdot N_i - c_i(h_i, N_i) - \mathbb{1}_{N_i > N^*}[\Delta\tau(h_i, m_n)]$$

Change in property taxes with notch

- π_i: profit for homeowner i
- p: nightly rental price
- N_i: annual rental days
- c_i: operation costs
- h_i: home value
- N^*: LRE rental day limit

STR Host / Taxpayer Optimization

Profit without notch

$$\pi_i = p \cdot N_i - c_i(h_i, N_i)$$

$$FOC \quad \frac{\partial \pi_i}{\partial N_i} = p - \frac{\partial c_i(h_i, N_i)}{\partial N_i}$$

$$p = MC$$

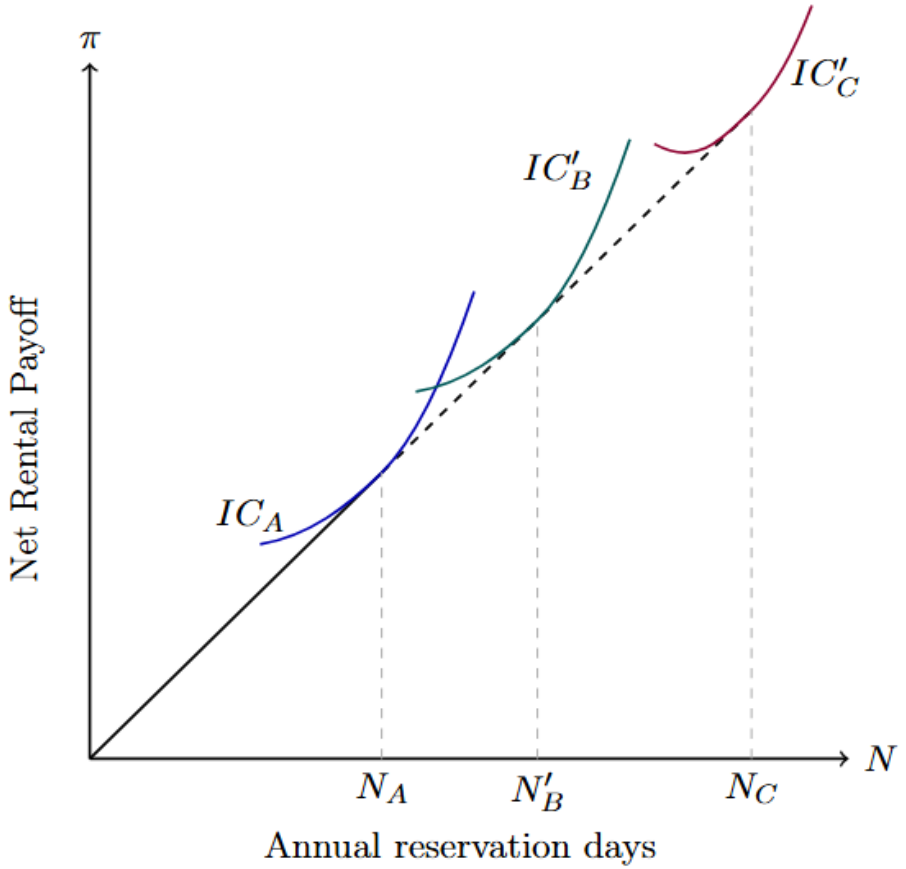

STR Host / Taxpayer Optimization

Profit without notch

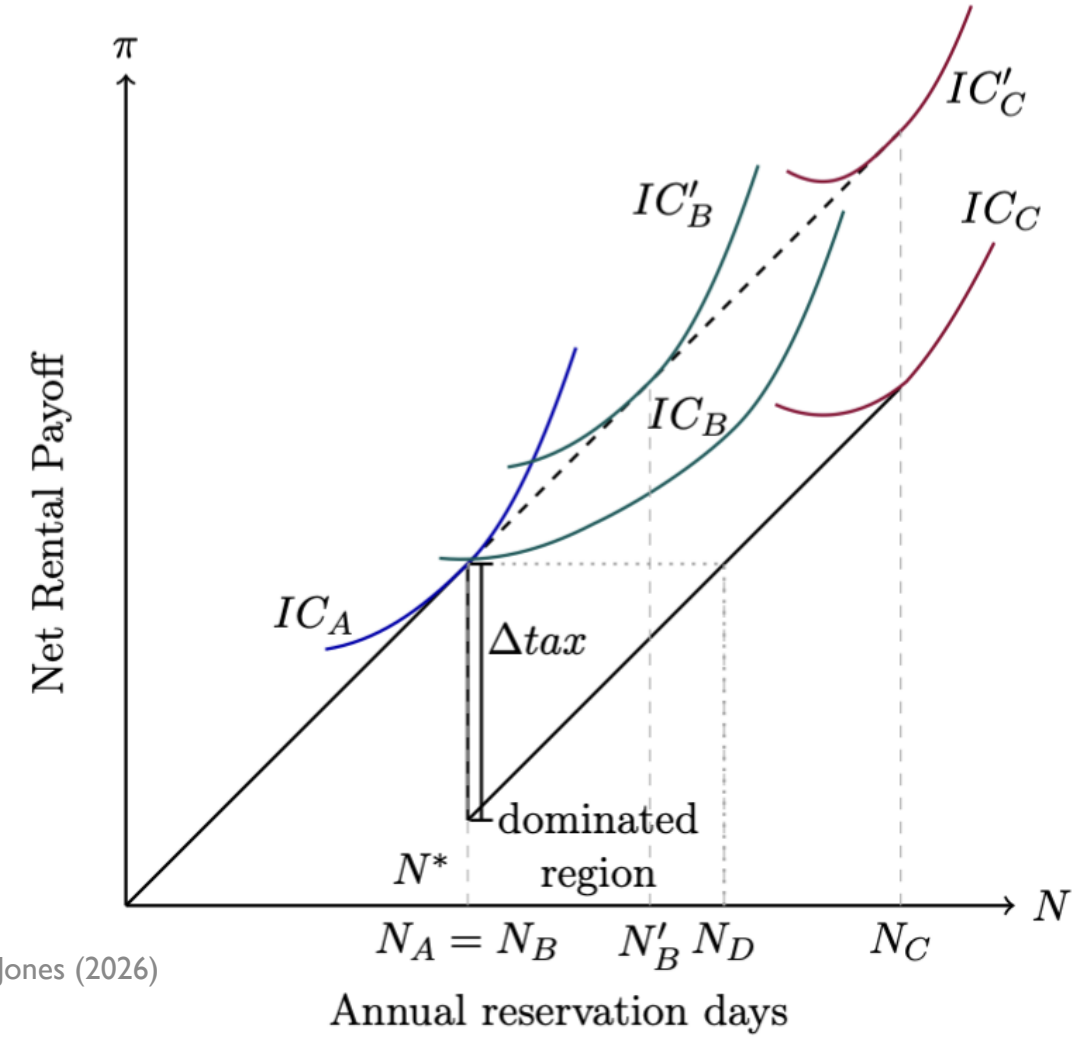

$$\pi_i = p \cdot N_i - c_i(h_i, N_i)$$

$$FOC \quad \frac{\partial \pi_i}{\partial N_i} = p - \frac{\partial c_i(h_i, N_i)}{\partial N_i}$$

$$p = MC$$

STR Host and Taxpayer Optimization

STR Host and Taxpayer Optimization

- Region where no one locates:

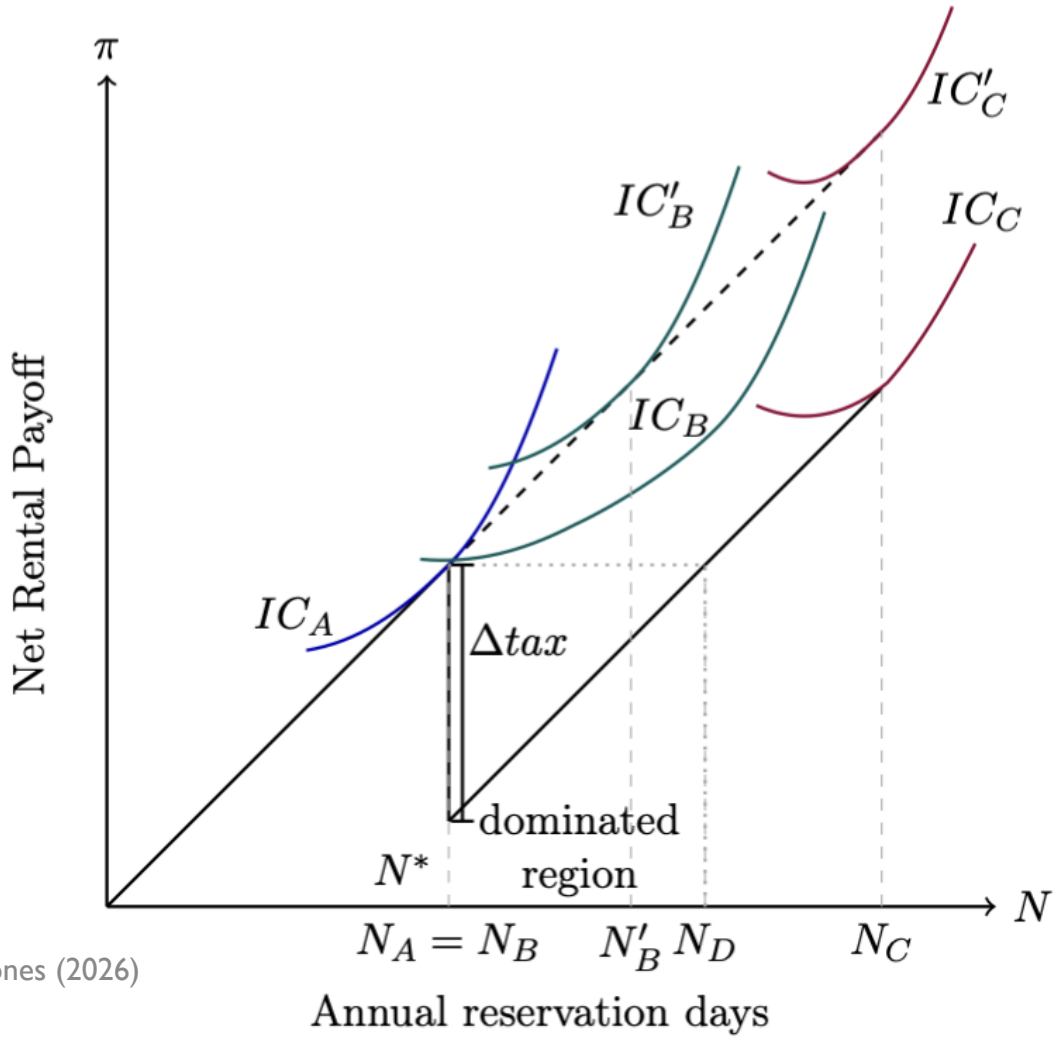

$$[N^*, N^* + \Delta N]$$

- where ΔN satisfies:

Additional Profit

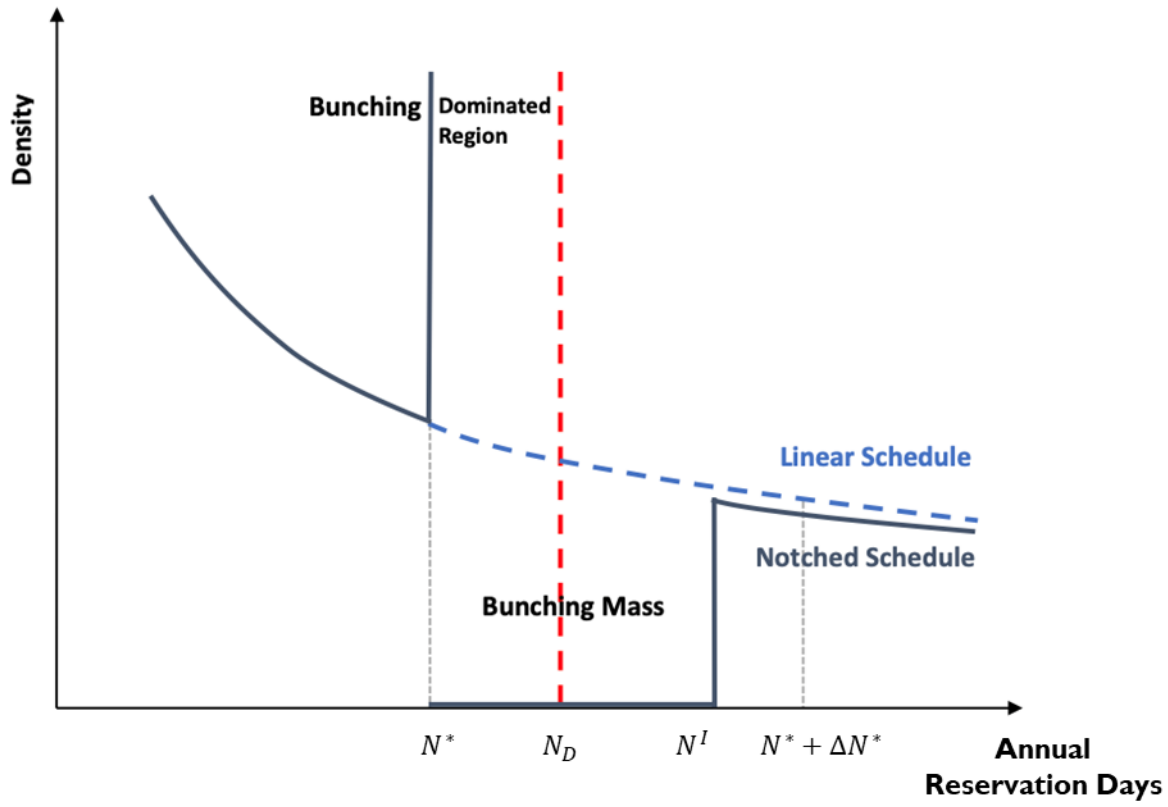

$$p \cdot \Delta N - (c_i(h_i, N^* + \Delta N) - c_i(h_i, N^*)) = \Delta\tau(h_i, m_n)$$

Change in property taxes

ESTIMATION METHOD

A context for bunching estimation: the notch

- Model situations with incentive changes
- Isolate tax avoidance due to intentional behavior of STR hosts
- Detecting behavioral adjustments by clustering

- **Notch in rental day limit for Homestead Exemption**

Evade, Exempt, Enforce - Jones (2026) LINK

Bunching estimation using notches in LRE rental limit

- Plot distribution of STR reservation days (N):
  - j bins with the count of STRs c_j in each bin
  - Bin: range of reservation days

Binned data

Coefficients for polynomial

Bunching Region [N_L , N_U]

Round Number Controls (ex: 7 days)

$$c_j = \sum_{i=0}^{p} \beta_i (N_j)^i + \sum_{i=N_L}^{N_U} \gamma_i \mathbb{1}[N_j = i] + \sum_{r \in R} \rho_r \mathbb{1}[\frac{N_j}{r} \in \mathbb{N}] + \sum_{k \in K} \theta_k \mathbb{1}[N_j \in K \wedge N_j \notin [N_L, N_U]] + \epsilon_j$$

Polynomial of degree p

Allow discontinuity at N = 30

Fixed Number Control (ex: 14 days)

Bunching estimation using notches in LRE rental limit

- Estimate counterfactual distribution of STR reservation days (N) without notch:
  - j bins with the count of STRs c_j in each bin
  - Bin: range of reservation days

Binned data

Coefficients for polynomial

Round Number Controls (ex: 7 days)

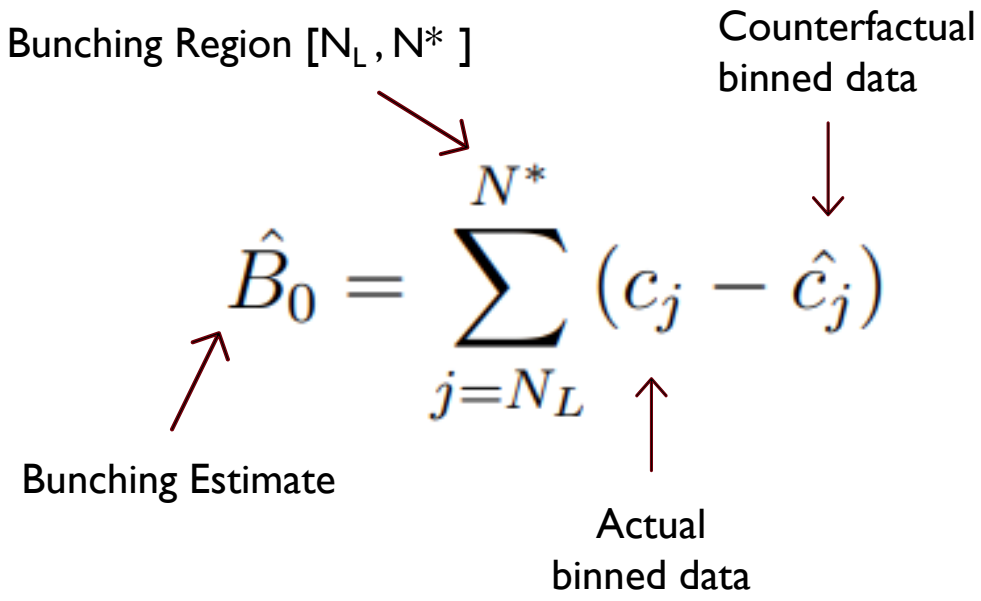

$$\hat{c_j} = \sum_{i=0}^{p} \beta_i (N_j)^i + \sum_{r \in R} \rho_r \mathbb{1}[\frac{N_j}{r} \in \mathbb{N}] + \sum_{k \in K} \theta_k \mathbb{1}[N_j \in K \wedge N_j \notin [N_L, N_U]] + \epsilon_j$$

Polynomial of degree p

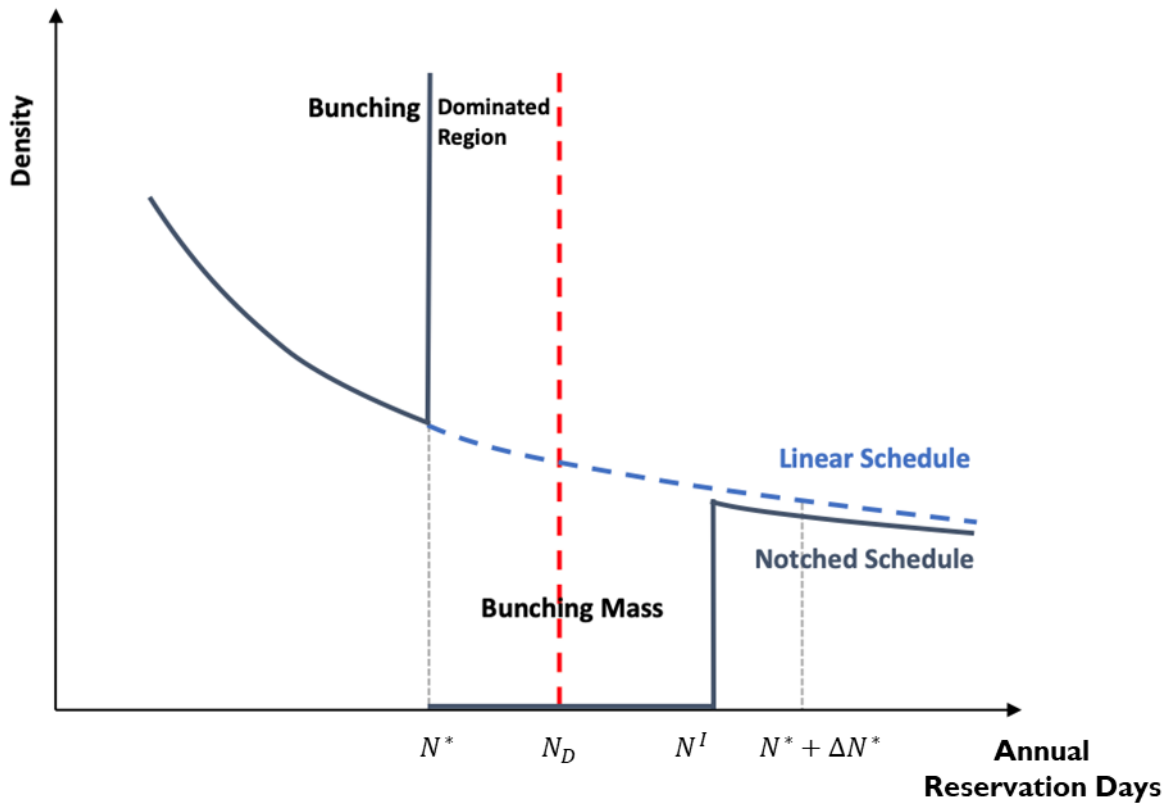

Fixed Number Control (ex: 14 days)

Bunching estimation using notches in LRE rental limit

- Estimate Excess Mass at N = 30 (FL)

Bunching estimation using notches in LRE rental limit

- Normalized excess mass: reduction in nights

$$\hat{b} = \frac{\hat{B}_0}{\hat{c}_0}$$

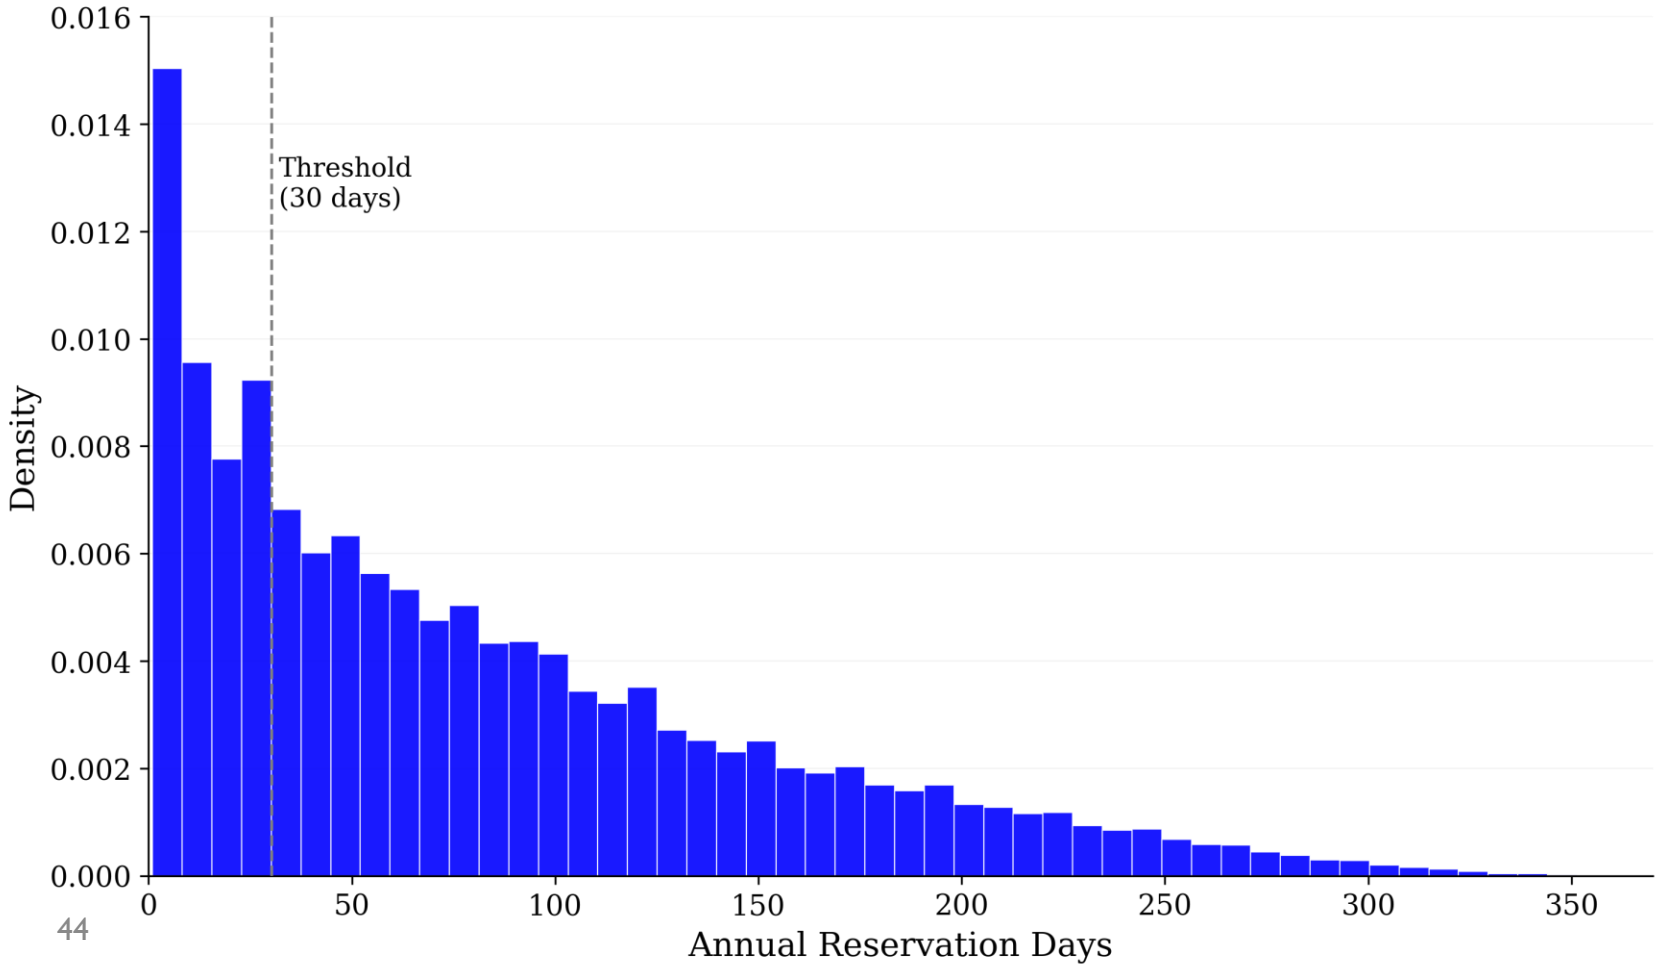

- Local Average Treatment Effect (LATE)

$$\hat{b}_{adj} = \frac{\hat{b}}{\widehat{sharecompliers}}$$

Bunching Estimator Assumptions

1. Smooth distribution → changes are behavior responses
   - Test graphically
2. Bunchers come from above the threshold
   - Support conceptually
3. The market has constant friction
   - Immense flexibility in booking, entering, and exiting STR market
   - Flexibility constant no matter number of bookings
4. No other changes at threshold
5. Correct functional form for counterfactual

Assumption 1: Smooth Distributions in STR market

Bunching Results pre-VCA

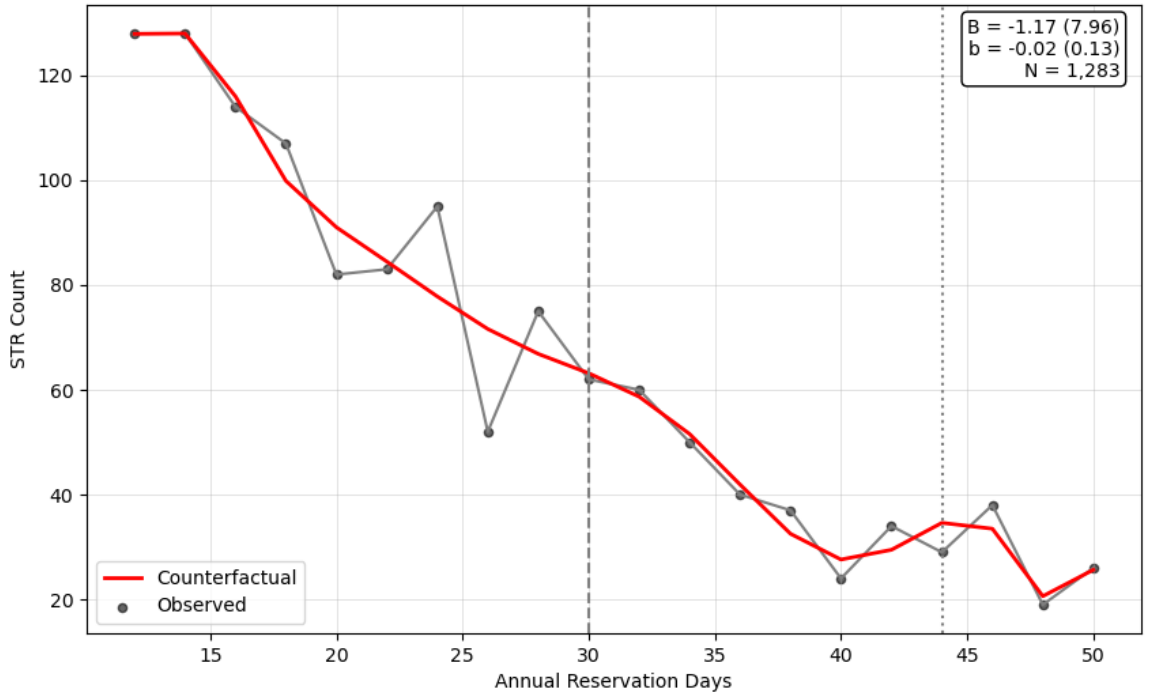

Pre-Period: 2015

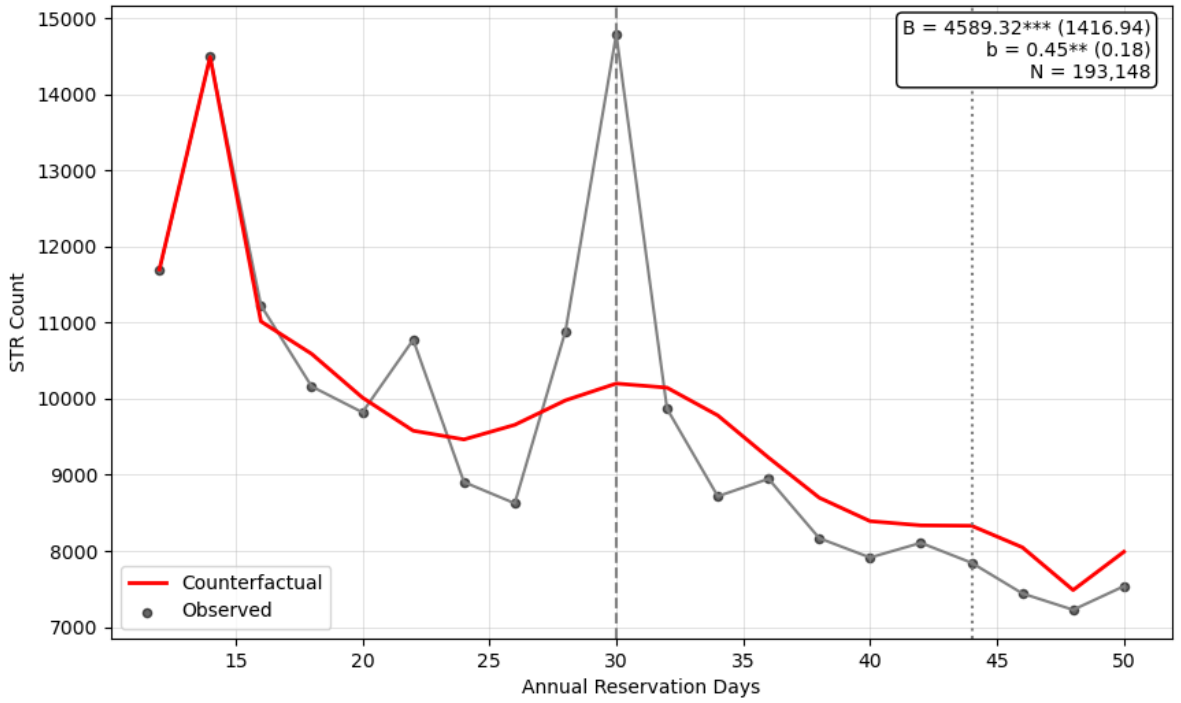

How does VCA impact this compliance?

Bunching Results pre- and post-VCA

Pre-Period: 2015

Post-Period: 2017-2024

Bunching Results pre- and post-VCA

	Florida (30-day limit)	
Year(s)	2015	2017–2024
Estimated Excess Mass	-1.171	4,589.321***
	(7.957)	(1,416.941)
Normalized Excess Mass	-0.019	0.450**
	(0.126)	(0.184)
Share of Bunchers	-0.022	0.027
Adj. Normalized Excess Mass (LATE)	0.826	16.464
N	1,283	193,148

- Average Rev per Night: $240
- Revenue Loss: 16.5 x 240 = $3,951

Quantifying the Response of the Marginal Buncher

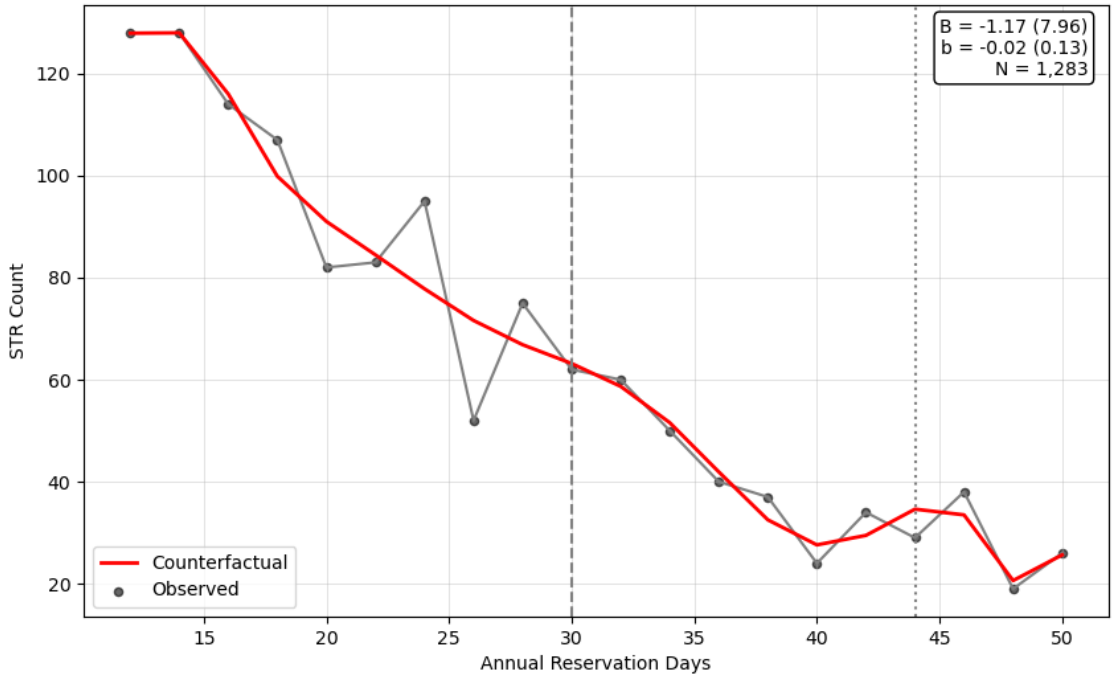

- Elasticity = $\epsilon_{N,t} = \frac{\%\Delta N}{\%\Delta T} = \frac{\hat{b}/N^*}{\Delta\lambda/\lambda}$
  - 1% increase in property tax → 1.0-2.8% decrease in nights booked
  - Compliers: 1% increase in property tax → 37-102% decrease in nights booked

A 100% elasticity in Florida would be renting 29 days instead of 60 days.

Conclusion

Results Recap: Evidence of a Spillover Effect of Indirect Reporting

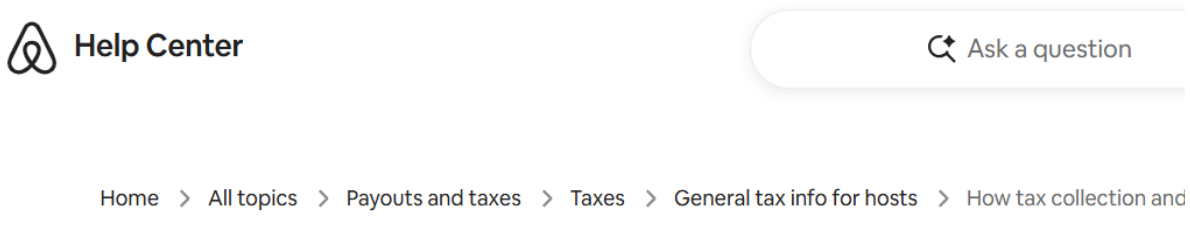

- **VCA Effect:** No bunching before the 2015 VCA; ~4,600 listings bunch after
- **Bunching Response:** The most responsive hosts cut bookings by ~16 nights

- How does third-party reporting affect compliance with taxes it does not directly target? **Improves Compliance**

Future Research: The Why behind the Spillover Effect

- Why would reporting that never mentions rental days matter?
  1. Perceived enforcement (primary channel)
     - VCAs bring Airbnb into the tax system, raising hosts' sense they could be detected
     - Airbnb notices about collecting taxes do not mention the homestead exemption (Airbnb Notices)
  2. Salience (secondary, indirect channel)
     - Information alone moves compliance (Granicus 2023)
     - Many hosts don't know the 30-day rule exists (Thomson 2018)
     - Potentially indirect – "check other tax obligations"
  3. High stakes (amplifier)
     - Losing homestead triggers market reassessment and forfeits SOH protection
     - The homestead exemption rule existed prior to VCAs
     - Explains the large effect, not the behavior change

Exploring Airbnb Tax Collection Information Pages

Understanding other tax obligations

We recommend doing some research to make sure you understand and comply with any local tax rules and obligations that apply to your listing. Check with your local government or a tax professional for additional information about taxes that apply to your situation.

Sources:

- https://www.airbnb.com/help/article/1036
- https://www.airbnb.com/help/article/2301

Applicable taxes

Our system determines which taxes are applicable by the address you enter for your stay, experience, or service listing. Please check your listing's details to make sure your address is correct. Even if Airbnb automatically collects and pays certain taxes on your behalf, you may still be required to manually collect other taxes. For example, Airbnb may collect regional taxes but not local ones in some places. Also, Airbnb is not responsible for any tax collection errors due to typos.

Tax and Fiscal Impact

- Before the VCA, an evading host rents more than 30 days but pays the residential rate.
- After the VCA, three options:

Host response	Tax rate paid	Revenue vs. evasion
1. Report it: keep renting more than 30 days	Commercial	**Gain**
2. Bunch: cut rentals to 30 days or fewer	Residential	**$0**
3. Dominated region: rent just over 30 days, lose exemption without enough extra income	Commercial	**Gain (not optimal for host)**

- Revenue gains come only from groups 1 and 3.

BUNCHERS ONLY

$13.8M*

forgone property tax revenue

4,600 hosts × $3,000
Range: $9.2M to $16.1M

Desired: +$13.8M
Realized: $0

**Under the Assumption that bunchers would have rented more than 30 days without the behavioral response.*

Darla Moore School of Business

Policy Implications

- Depends on the goal of local government
- Thresholds and reporting curb commercialization of housing
  - At a cost to revenue and efficiency
- Smooth the notch
  - Gradual exemption phaseout instead of a sharp 30-day cutoff

Bigger Questions for Future Research

- **Are counties equipped to enforce rental day limits?**
  - Counties face high enforcement costs
  - Data-sharing lowers enforcement costs
  - Integrate property tax records with STR data?

- **Is 30 days the right limit? 14? 72?**
  - Tax design, salience, size impact compliance
  - Compliance → key to fairness and fiscal stability
